

Dependency Relationship (- - - >): Class calls a method which requires another class (not stored in its attributes) obtained from the central manager

Unidirectional Association (→)
Only 1 class is aware that the other class exists (eg BaseBoundary & CentralManager)

Composition : Class can only exists with another class (eg Request and Student/Supervisor/Coordinator)

Aggregation: Class is a part of another class, but a class can exist without another. (Projects and Student/Supervisor/Coordinator)
